## CEO's Message for the First Quarter of Fiscal 2006

The 51<sup>st</sup> Annual General Meeting of Shareholders was held in Palace Hotel, Tokyo, on the 18<sup>th</sup> of March, this year. The highlight of this meeting was the amendment of Articles of Incorporation in order to comply with the new Corporate Law which was enacted on 1<sup>st</sup> May. In the amendment, the change that is related directly to shareholders, first of all, is the allowance of quarterly dividend payment. Sumida has been paying dividends twice a year, interim and end-of-term, up until now. However, by the newly provided article, we are planning to start quarterly dividend payments once all preparation work is done. Secondly, due to several share splits that caused many shareholders to hold less than number of shares required for one tradable unit (100 shares), shareholders requested an amendment which would enable them to purchase the remaining shares in order to make those shares tradable. For this reason, we are pleased to take this opportunity to announce that the respective article was modified and the requested policy has been adopted.

After completion of the acquisition, VOGT has become our consolidated subsidiary. As it is the first consolidation of VOGT, we made a conservative estimate of its business achievement. However, since no significant problems occurred, our results for the 1<sup>st</sup> Quarter were beyond the expectations. Sales grew 57.1% year on year to 14.806 billion yen and operating profit grew 52.7% year on year to 1.081 billion yen respectively. In addition, Sumida had retained Euro as funding for the acquisition of VOGT that, due to the depreciation of yen against the Euro during the period, caused non-operating revenue to increase. This resulted in a 97.5 % increase in recurring profit to 1.205 billion yen compared with the previous year,

From this quarter, we have VOGT as a new addition to the Sumida Group. VOGT's 70-year-old history in Europe and Sumida's 50-year-old history in Asia has resulted in a group with 20,000 employees, in 34 different locations over 19 countries. For the future integration, it is very important that each company maintains their organic growth. In late March, a total of 91 key members of both companies gathered in Hong Kong, staying in a 3 day 2 night camp resembling a business school forum where members discussed and exchanged opinions until the early hours. Finally, eight concrete projects that aimed to achieve the goal of 1B7 and target next steps of integration were worked out, providing a good start to our collaboration and synergy. In the future, Sumida and VOGT will strive, with sufficient recognition of cultural differences between the two companies, to become one big family (1BF). We will maintain information exchange and open communication throughout the company, and at the same time, work towards the maximum synergic effect with VOGT in order to achieve the group-wide targets of a 10% profit ratio and 1B7.

Shigeyuki Yawata  
CEO

SUMIDA CORPORATION

**Consolidated Financial Highlights for the 1st Quarter ended 31 March 2006**

## Overview of Consolidated Business Results for the First Quarter of 2006

In the First Quarter of 2006, both foreign and domestic demand accelerated in major euro-nations like England, Spain and Germany, evidencing a more strengthening economy in Europe. The relatively stable commodity prices, except for oil and food, in addition to the expanding employment resulted from sustainable business performance of the corporate sector in the U.S. are expected to boost personal spending. The tight monetary policy through 15 consecutive times of the benchmark-rate increase by the U.S. federal government to reduce housing investment had produced the anticipated effect. Views criticizing such excessive control are intensifying as the market features with the self-adjustment mechanism to direct its own future growth. The economic growth in China for the investment of fixed assets from public work projects and contribution from exports gained 10.2% from the same term last year. The high lending rate for enterprises and other macroeconomic control coupled with the promotion for personal spending by the China Authority to relieve the overheating investment is likely to attain a soft landing.

All industries in Japan, first from the real estate market and financial industry, and followed by all manufacturing, non-manufacturing and government-related organizations, have been eventually sneaking out from the long-lasting structural adjustment and stepping towards the growing track. Not only the financial position of the enterprises improves but the consolidated recurring profit also records twice as much as it was in the bubble mature stage. Satisfactory business achievement pushes the investment for plant and equipment and in turn drives the employment market giving rise to the upward personal spending.

The economic growth of the fourth quarter of 2005 in India climbed 7.6% from the same term of 2004 thanks to continual expansion of the finance, service and manufacturing industries and it has been the 5<sup>th</sup> successive quarter reporting a gain of over 7%. With governmental incentives like reduction of commodity tax and tariffs, and establishment of Special Economic Zones, the growth is expected to further reach 10% in 2006.

The demand for electronic equipment remained high in the 1<sup>st</sup> quarter, attributable to the popularization of digital home appliances, the desire for replacement of new models and the demand for cellular phones in the emerging markets, as well as the greater than before production of PC and PC peripherals since August of 2005.

Shipment for audiovisual equipment like liquid crystal display (LCD) TVs, PDP-TVs and portable music players was trending toward favorable expansion. Shipment for personal computers in 2005 was up 15.3% to 219 million sets from 2004 and added 13.1% to 57 million sets in the 1st quarter of 2006 from a year earlier. Shipment volume for cellular phones in 2005 rose 21.2% to 816 million pieces from 2004 and is expected to gain 26.0% to 227 million pieces in the 1<sup>st</sup> quarter of 2006 compared with same term of 2005. As the new car sales worldwide are undergoing high-level expansion, demand for automotive electronic parts and peripherals that optimize safety, comfort and fuel-economy for cars has been prospering.

Under such circumstances, Sumida Group has acquired a German principal coil manufacturer – VOGT Electronic which has accordingly become one of our subsidiaries contributing to our consolidated financials since January 1, 2006. Its Component Section engaging with traditional wire-winding expertise is categorized under our Legacy Business whereas its EMS section is integrated into our Other Business mainly focusing on new businesses. Along with Inverter business dealing with liquid crystal TVs and flat panels and the Automotive business handling automotive-related parts, we are committed to develop effectual mechanics to realize our mid-term goal of “**1B7**” – [Consolidated Sales to reach US\$1 Billion in 2007].

Overall sales of the First Quarter of 2006 were up 57.1% from the same term last year to ¥14,806 million, attributable to the soaring revenue from existing business of Power Inductor, Power Solution and Signal, as well as from the participation of the Component Section of VOGT for Legacy, together

with the upward achievement of STELCO and the incorporation of EMS Section of VOGT for Other Business, in addition to the moderate growth of Automotive Company. This is despite the drastic downturn in the sales of the Inverter Company.

Operating income was up 52.7% year-on-year to ¥1,082 million and was rooted in the considerable sales of not only Legacy from existing business, and the new Components Section of VOGT but also Other Business from STELCO and new EMS Section of VOGT. The collectively increased margin was sufficient to write off the rising expenditures on R&D and general overhead in keeping up with the business capacity, the negative impact from the weak Euro due to sales to European customers of Automotive and the sale decline of the Inverter business. Ordinary income was up 97.6% to ¥1,206 million and was explained by exchange gain and decreasing investment loss derived from the equity method. Net income increased 94.3% to ¥727 million from the same term last year.

**Business Segment Information**

Sumida group's business is composed of the Legacy business, Inverter business, Automotive business and Other business.

1. Legacy business

Sales in our legacy business increased to ¥9,793 million, about 2.4 times as much as a year earlier, as a consequence of the steady growth of Power Inductor being the main pillar of Legacy accompanied by the upturn sales of Power Solution and Signal in addition to the new participation of the Component Section of VOGT. Operating income was up 37.5% year-on-year to ¥2,643 million which resulted from the increased revenue of existing businesses plus the contribution of the Component Section of VOGT.

a) Power Solution

Sales of power solution increased 26.1% to ¥765 million from a year earlier.

In terms of area, sales improved in the U.S., Europe, Singapore, China and Japan but decreased in Hong Kong, and Taiwan. For sales by product used, in addition to the contribution of 4V coil for switching between cooling and heating which was removed from Automotive and classified into Legacy, OA and communication devices, automotive-related products and industrial equipments increased while audiovisual equipments declined.

b) Power Inductor

Sales of power inductors were up 23.6% year-on-year to ¥3,342 million.

In terms of area, sales expanded in all areas like the U.S., Europe, Japan, Hong Kong & China

and Taiwan except Singapore. For sales by product used, PC & PC peripherals, AV equipments, automotive-related products, communication devices increased whereas digital cameras, security equipment and POS related products decreased.

c) Signal

Sales of signal totaled ¥1,025 million, up 20.6% from a year earlier.

In terms of area, sales expanded in the U.S., Europe, Singapore, Hong Kong, China and Taiwan except Japan. For sales by product used, AV equipments, communication devices and automotive-related devices expanded whereas OA equipments, PC peripherals, and animal tags declined.

d) Component

Sales of Component in this quarter increased 11.6% to ¥4,661 million compared with the 4<sup>th</sup> quarter of 2005 as a result of the enlarged production volume by the customers following the economic recovery of Europe.

2. Inverter business

Sales of inverter dived 35.3% to ¥1,823 million from the year-before figure.

In terms of area, sales dropped in all areas except Europe and China. For sales by product used, LCD monitors, liquid crystal TV, automotive equipments, other monitor (except PC) and recreational devices except notebook-sized PC all decreased. Operating income dropped 12.3% year-on-year to ¥356 million due mainly to the eroded revenue despite the reduction of production costs on raw materials and wages.

3. Automotive business

Sales in automotive business rose 4.4% to ¥1,950 million from the same term last year.

In terms of area, sales grew stably in Europe, Singapore and Hong Kong in spite of reduction in the U.S., Japan and China. For sales by product used, aside from the re-classification of 4V coil for switching between cooling and heating to Legacy Business; ABS, keyless entry, injection coils for the direct-injection engine, immobilizers and suspension-system-related coils all sharply increased.

Operating income lost 54.7% year-on-year to ¥235 million attributed in part to the declining sales to major European customers derived from the depreciation of Euro and, in part, to the increased raw-material cost caused by the surge of copper price.

4. Other business

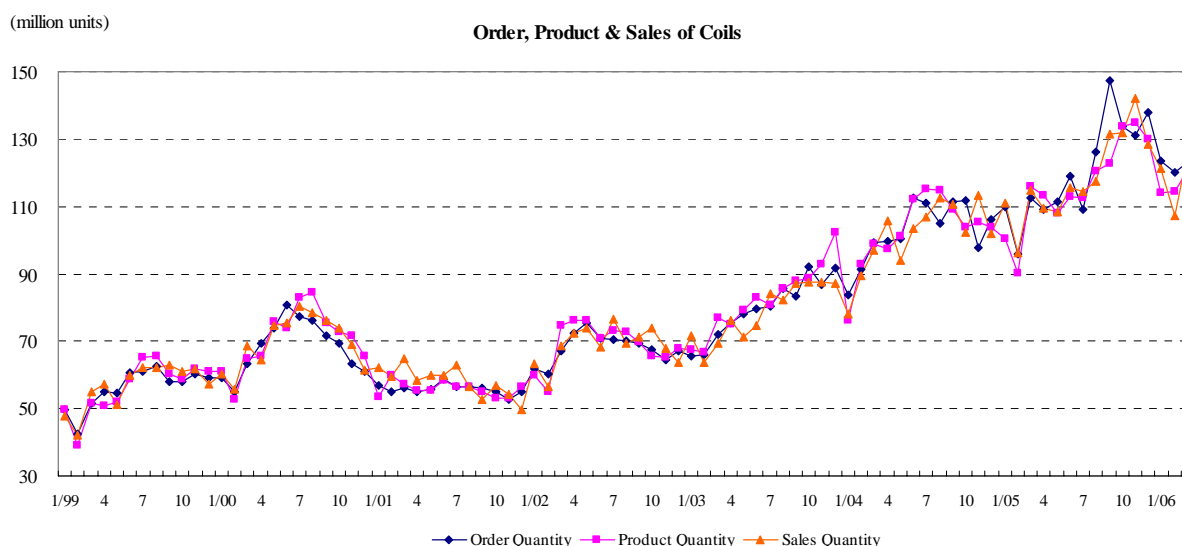

Sales in Other business were 2.1 times as much of the same term last year to ¥1,240 million thanks partly the revival of STELCO and partly to the incorporation of the EMS Section of VOGT. Operating income stood at 2.1 times as much of a year earlier to ¥248 million for the additional revenue of STELCO and contribution of EMS Section of VOGT.

## The Future Management Environment and Business Development Policy

The discussion below is future management environment and our business development policy. The following descriptions include Sumida group's forecasts of future prospects, which Sumida group judged from an independent standpoint and adopted as management guidelines. In reality, however, actual results may sometimes deviate largely from such forecasts owing to various factors such as change of economic environment in each country of the world, outbreak of any unforeseen event, etc. Thus readers are requested to refrain from relying fully on these forecasts.

Orders for coils received by Sumida Group remained at a high level.

The monthly volume of orders received for coils except VOGT (orders received during the current month = scheduled to sell during the current month) was 134 million pieces on average per month in the 4<sup>th</sup> quarter of 2005 and up 15.1% year-on-year to 122 million pieces per month in the 1<sup>st</sup> quarter of 2006 after the record high of 147 million pieces in last September.

The future demand for electronic parts is predicted to record a continual growth in a moderate level.

Shipment volume of personal computers worldwide kept a double-digit increase by 13.1% year-on-year to 57 million sets in the 1<sup>st</sup> quarter of 2006 following the rise of 15.3% to 219 million sets in 2005 compared with 2004. Demand in Asian Pacific, Latin American, Europe, Middle East and Africa all reported high growth rate where Europe, Middle East and Africa have developed to be the largest market in the globe. As the growth continues in the budding markets, the demand for personal computers in 2006 is expected to outperform by 11% than the previous year. The notebook-sized PC in particular is projected to achieve 31.4% increase from the last year.

Shipment volume of cellular phones in 2005 was up 21.2% to 816 million sets compared with 2004 and climbed 26.0% year-on-year to about 227 million pieces in the 1<sup>st</sup> quarter of 2006 showing a continual upward tendency. The volume is estimated to reach 920 million pieces and 1,010 million pieces respectively in 2006 and 2007 in view of the persistent demand from the emerging markets such as Asia Pacific, Middle East and Africa.

Shipment volume for liquid-crystal display (LCD) TVs increased by about 2.2 times as much of 2004 to 20 million sets in 2005. The volume in 2006 would have in all likelihood reached 40 million sets which exceeded the initial estimate of 36 million sets. With strong desire of the Panel Manufacturers to enlarge production in connection with the 2006 German World Cup and the 2008 Beijing Olympics, the upward trend of the electronics market is expected to go on for the medium to long term.

New car registration in the U.S., Europe and Japan boosted collectively 0.3% to 35,883 thousand sets and the increasing registration in the U.S. just paid off the shortfall in Europe and Japan. Shipment volume in the 1<sup>st</sup> quarter of 2006 gained 1.8% to 9,177 thousand sets due to stable demand in the U.S. and revival in Europe despite the lasting stagnancy in Japan. New car sales are expected to maintain at high level in the U.S., Europe and Japan and grow vigorously in China, Korea, India, Brazil, Russia and other developing areas. To raise the safety, comfort and fuel-economy performance, the electronic parts for automobile have been diversified with very advanced electronics. The demand for automobile related electronic parts like semi-conductor, various sensors, motor, actuator, relay, condenser, resistance and coils is therefore foreseen to record growth in long term.

Amid such business environment, Sumida group has acquired VOGT, a well-established German coil manufacturer. With VOGT being one of the consolidating subsidiaries commencing from the 1<sup>st</sup> quarter of 2006, Sumida aims toward a further growth that may outstrip the electronic parts market worldwide.

#### 1. Legacy business

For power solution, sales of AV equipment declined for production adjustment in the 1<sup>st</sup> half and resumed from the 2<sup>nd</sup> half of 2005. Sumida is committed to seize extra market shares for digital camera, DVC, DVD player, printer related devices. It is also our direction to reinforce new developments in automotive-mounted products in expected demand.

For power inductor, we seek to develop parts in new miniature designs with multi and power conserving traits to build the customer base. More effort will be extended to push sales on cellular phones, digital cameras, HDD, notebook-sized computers, automotive-mounted parts, game devices, printers and portable music player. We scheduled not only to reinforce the sales of cellular phones in Japan, Europe and the U.S. but also to increase sales to main customers for HDD related parts following the increased production of personal computers. The leading customer that had placed order of portable music player with us since the 2<sup>nd</sup> half of 2005 has entered into production adjustment starting this quarter and expected to resume full-fledged production for new products in the coming 3<sup>rd</sup> quarter. Samples of PDP which incorporates more units of Power Inductor in particular have been delivered to customers on schedule and are expected to make contribution to sales soon.

For signal, the business intends to bolster sales of telecommunication products including modem and ADSL; automotive-related products including keyless entry and TPMS in addition to the major sales of toner sensors, and to reinforce the sales of Signals used for animal tags.

The Components section of VOGT joins in the 1<sup>st</sup> quarter to form a part of Legacy Business. It sells coils, various modules, sensors and the like for a wide variety of applications such as automotive devices, communication equipment, industrial & medical equipment, recreational equipment, home appliances and lighting devices mainly to Europe, America and China. Sumida and VOGT has started the integration process in which resources and useful systems of both sides in respect of products, human resources, sales network, R&D, manufacturing know-how and other aspects would be effectively reshuffled to optimize the synergy effect.

#### 2. Inverter business

The Inverter business deals with the inverter transformers and inverter units used for of notebook-sized PC, LCD monitors, liquid-crystal display (LCD) TV and recreational devices. Sales of notebook-sized PCs did not increase in the 1<sup>st</sup> quarter because of the change of model by the major customer but turnover for new model is likely to resume in the next quarter. To address the demand for simplified design and space-economy feature with LCD monitor, the adoption of the two-in-one system which unifies the functions of AC/DC converter on a primary power source and DC/AC inverter on a secondary power source has increased. The Business will endeavor to lift R&D capability on primary power source with the aim of grasping more market shares. Concurrently, we are striving for sales of inverters and transformers used for LCD TVs, mainly in

Taiwan and Japan.

3. Automotive business

For ABS coils, we are continuing making all-out efforts to grow the sales. On the other hand, we have developed three customers for Keyless Entry with a wide range of models. Apart from struggling for new customers, the business also stresses expanding shares from existing clients. New product for injection coils used for the direct-injection engine will be established by the end of the 2<sup>nd</sup> quarter with mass production scheduled in the 3<sup>rd</sup> quarter of 2006. Dynamic activities have started in driving sales of coils for immobilizers, navigation systems, EPS (electronic power steering) and air bags in the worldwide market.

4. Other business

STELCO, resuming from the stagnant economy in Europe last year, reported an in-excess-of-commitment result in the 1<sup>st</sup> quarter. As major customers in Europe have made positive business, more inquiries and business opportunities are expected. Sales, especially condensers for digital TVs STB (Set Top Box), and chip inductor for automobile, industrial equipment, transmitter and home appliance, are all projected to expand.

JENSEN currently sells mainly surge arresters, and GDT used for projectors in Europe. Sales of the GDT for the automotive-related devices are expected to be actualized gradually in the latter half of 2006.

The EMS Section of VOGT joins in the 1<sup>st</sup> quarter to form a part of the Other Business. It sells power steering control units, GPS antennas, theft-prevention control units, control units for the Diesel engine, and power supply products and others to mainly European customers. Besides, the restructuring programs have been thoroughly completed and immediate profits can be expected.

**Forecast of Business Results in the Second Quarter of 2006**

Sumida group is publishing the forecast of business results by compiling commitments submitted from each of our divisions covering the following quarter.

The following is our forecast at this point of business results in the second quarter of 2006.

Forecast of consolidated business results in the second quarter of 2006 (from Apr 1 to Jun 30, 2006)	Actual figures of consolidated business results in the second quarter of 2005 (from Apr 1 to Jun 30, 2005)
Sales ¥15,200M	Sales ¥9,700M
Ordinary income 1,050M	Ordinary income 513M
Net income 600M	Net income 318M

(Exchange rate is premised at ¥110 per U.S. \$1)
